

ABSTRACT OF THE DISCLOSURE

5 A device associated with a cap, visor or hat having a bill, which allows
a wearer to selectively view objects through a lens or face shield includes a
mounting member adapted to be removably attached to the bill of the cap. The
mounting member may be a sleeve adapted to removably receive the bill, a clip
for removable attachment with the bill, or a shell adapted to overlie at least a
portion of an exterior surface of the cap and bill. An eye shield is attached to
the mounting member so as to be selectively positionable relative to the eyes
10 of the wearer. The eye shield, which includes the lens, is preferably attached
to the mounting member such that it can be moved between various positions
relative to the eyes of the wearer. The eye shield and lens are also preferably
removably attached to the mounting member to accommodate different lenses.
